

SNx4HC165 8-Bit Parallel-Load Shift Registers

1 Features

- Wide Operating Voltage Range of 2 V to 6 V
- Outputs Can Drive Up to 10 LSTTL Loads
- Low Power Consumption, 80- μ A Maximum I_{CC}
- Typical $t_{pd} = 13$ ns
- ± 4 -mA Output Drive at 5 V
- Low Input Current of 1 μ A Maximum
- Complementary Outputs
- Direct Overriding Load (Data) Inputs
- Gated Clock Inputs
- Parallel-to-Serial Data Conversion
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

2 Applications

- Programmable Logic Controllers
- Appliances
- Video Display Systems
- Output Expander
- Keyboards

3 Description

The SNx4HC165 devices are 8-bit parallel-load shift registers that, when clocked, shift the data toward a serial (Q_H) output. Parallel-in access to each stage is provided by eight individual direct data (A–H) inputs that are enabled by a low level at the shift/load (SH/LD) input. The SNx4HC165 devices also feature a clock-inhibit (CLK INH) function and a complementary serial (\bar{Q}_H) output.

Clocking is accomplished by a low-to-high transition of the clock (CLK) input while SH/LD is held high and CLK INH is held low. The functions of CLK and CLK INH are interchangeable. Because a low CLK and a low-to-high transition of CLK INH also accomplish clocking, CLK INH must be changed to the high level only while CLK is high. Parallel loading is inhibited when SH/LD is held high. While SH/LD is low, the parallel inputs to the register are enabled independently of the levels of the CLK, CLK INH, or serial (SER) inputs.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74HC165D	SOIC (16)	10.00 mm x 6.20 mm
SN74HC165DB	SSOP (16)	8.20 mm x 6.50 mm
SN74HC165N	PDIP (16)	6.60 mm x 18.92 mm
SN74HC165NS	SO (16)	8.20 mm x 9.90 mm
SN74HC165PW	TSSOP (16)	6.60 mm x 5.10 mm
SN54HC165FK	LCCC (20)	9.09 mm x 9.09 mm
SN54HC165J	CDIP (16)	21.34 mm x 7.52 mm
SN54HC165W	CFP (16)	9.40 mm x 7.75 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Logic Diagram Positive Logic

Pin numbers shown are for the D, DB, J, N, NS, PW and W packages.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision G (August 2013) to Revision H	Page
• Added <i>Applications</i> section, <i>Device Information</i> table, <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1
• Added Military Disclaimer to <i>Features</i> list	1
• Added ESD warning	16

Changes from Revision F (December 2010) to Revision G	Page
• Updated document to new TI data sheet format - no specification changes	1
• Removed <i>Ordering Information</i> table	1
• Added Handling Ratings table	4
• Extended maximum temperature operating range from 85°C to 125°C	4

Pin Functions⁽¹⁾

NAME	PIN		I/O	DESCRIPTION
	D, DB, N, NS, PW, J or W	FK		
A	11	14	I	Parallel Input
B	12	15	I	Parallel Input
C	13	17	I	Parallel Input
CLK	2	3	I	Clock input
CLK INH	15	19	I	Clock Inhibit, when High No change in output
D	14	18	I	Parallel Input
E	3	4	I	Parallel Input
F	4	5	I	Parallel Input
G	5	7	I	Parallel Input
GND	8	10	—	Ground Pin
H	6	8	I	Parallel Input
NC	—	1	—	Not Connected
		6		
		11		
		16		
QH	9	12	O	Serial Output
QH	7	9	O	Complementary Serial Output
SER	10	13	I	Serial Input
SH/LD	1	2	I	Shift or Load input, When High Data, shifted. When Low data is loaded from parallel inputs
VCC	16	20	—	Power Pin

(1) NC – No internal connection

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage	-0.5	7	V
I _{IK}	Input clamp current ⁽²⁾	V _I < 0 or V _I > V _{CC}		±20 mA
I _{OK}	Output clamp current ⁽²⁾	V _O < 0 or V _O > V _{CC}		±20 mA
I _O	Continuous output current	V _O = 0 to V _{CC}		±25 mA
	Continuous current through V _{CC} or GND			±50 mA
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±1500 V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

 over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage	2	5	6	V
V _{IH}	High-level input voltage	V _{CC} = 2 V	1.5		V
		V _{CC} = 4.5 V	3.15		
		V _{CC} = 6 V	4.2		
V _{IL}	Low level input voltage	V _{CC} = 2 V		0.5	V
		V _{CC} = 4.5 V		1.35	
		V _{CC} = 6 V		1.8	
V _I	Input voltage	0		V _{CC}	V
V _O	Output voltage	0		V _{CC}	V
Δt/Δv ⁽²⁾	Input transition rise and fall time	V _{CC} = 2 V		1000	ns/V
		V _{CC} = 4.5 V		500	
		V _{CC} = 6 V		400	
T _A	Operating free-air temperature	SN54HC165	-55	125	°C
		SN74HC165	-40	125	

- (1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number [SCBA004](#).
- (2) If this device is used in the threshold region (from V_{IL} max = 0.5 V to V_{IH} min = 1.5 V), there is a potential to go into the wrong state from induced grounding, causing double clocking. Operating with the inputs at t_r = 1000 ns and V_{CC} = 2 V does not damage the device; however, functionally, the CLK inputs are not ensured while in the shift, count, or toggle operating modes.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾	SN74HC165					UNIT	
	D (SOIC)	DB (SSOP)	N (DIP)	NS (SO)	PW (TSSOP)		
R _{θJA}	Junction-to-ambient thermal resistance	73	82	67	64	108	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics, $T_A = 25^\circ\text{C}$

over recommended operating free-air temperature range for both the SN74HC165 and SN54HC165 (unless otherwise noted)

PARAMETER	TEST CONDITIONS		V_{CC}	MIN	TYP	MAX	UNIT
V_{OH}	$V_I = V_{IH}$ or V_{IL}	$I_{OH} = -20 \mu\text{A}$	2 V	1.9	1.998		V
			4.5 V	4.4	4.499		
			6 V	5.9	5.999		
		$I_{OH} = -4 \text{ mA}$	4.5 V	3.98	4.3		
			6 V	5.48	5.8		
V_{OL}	$V_I = V_{IH}$ or V_{IL}	$I_{OL} = 20 \mu\text{A}$	2 V		0.002	0.1	V
			4.5 V		0.001	0.1	
			6 V		0.001	0.1	
		$I_{OL} = 4 \text{ mA}$	4.5 V		0.17	0.26	
			6 V		0.15	0.26	
I_I	$V_I = V_{CC}$ or 0		6 V		± 0.1	± 100	nA
I_{CC}	$V_I = V_{CC}$ or 0,	$I_O = 0$	6 V			8	μA
C_i			2 V to 6 V		3	10	pF

6.6 Electrical Characteristics, SN54HC165

 over recommended operating free-air temperature range, $T_A = -55^\circ\text{C}$ to 125°C (unless otherwise noted)

PARAMETER	TEST CONDITIONS		V_{CC}	MIN	TYP	MAX	UNIT
V_{OH}	$V_I = V_{IH}$ or V_{IL}	$I_{OH} = -20 \mu\text{A}$	2 V	1.9			V
			4.5 V	4.4			
			6 V	5.9			
		$I_{OH} = -4 \text{ mA}$	4.5 V	3.7			
			6 V	5.2			
V_{OL}	$V_I = V_{IH}$ or V_{IL}	$I_{OL} = 20 \mu\text{A}$	2 V			0.1	V
			4.5 V			0.1	
			6 V			0.1	
		$I_{OL} = 4 \text{ mA}$	4.5 V			0.4	
			6 V			0.4	
I_I	$V_I = V_{CC}$ or 0		6 V			± 1000	nA
I_{CC}	$V_I = V_{CC}$ or 0,	$I_O = 0$	6 V			160	μA
C_i			2 V to 6 V			10	pF

6.7 Electrical Characteristics, SN74HC165

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS		V_{CC}	MIN	TYP	MAX	UNIT
V_{OH}	$V_I = V_{IH}$ or V_{IL}	$I_{OH} = -20 \mu\text{A}$	$T_A = -40^\circ\text{C}$ to 125°C	2 V	1.9		V
				4.5 V	4.4		
				6 V	5.9		
		$I_{OH} = -4 \text{ mA}$	$T_A = -40^\circ\text{C}$ to 85°C	4.5 V	3.84		
				$T_A = -40^\circ\text{C}$ to 125°C	3.7		
			$I_{OH} = -5.2 \text{ mA}$	$T_A = -40^\circ\text{C}$ to 85°C	6 V	5.34	
$T_A = -40^\circ\text{C}$ to 125°C	5.2						
V_{OL}	$V_I = V_{IH}$ or V_{IL}	$I_{OL} = 20 \mu\text{A}$	$T_A = -40^\circ\text{C}$ to 125°C	2 V		0.1	V
				4.5 V		0.1	
				6 V		0.1	
		$I_{OL} = 4 \text{ mA}$	$T_A = -40^\circ\text{C}$ to 125°C	4.5 V		0.33	
			$T_A = -40^\circ\text{C}$ to 125°C	6 V		0.33	

Electrical Characteristics, SN74HC165 (continued)

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	V _{CC}	MIN	TYP	MAX	UNIT
I _I	V _I = V _{CC} or 0, T _A = –40°C to 125°C	6 V			±1000	nA
I _{CC}	V _I = V _{CC} or 0, I _O = 0, T _A = –40°C to 85°C	6 V			80	μA
	T _A = –40°C to 125°C				160	
C _i	Recommended T _A = –40°C to 125°C	2 V to 6 V			10	pF

6.8 Switching Characteristics, T_A = 25°C

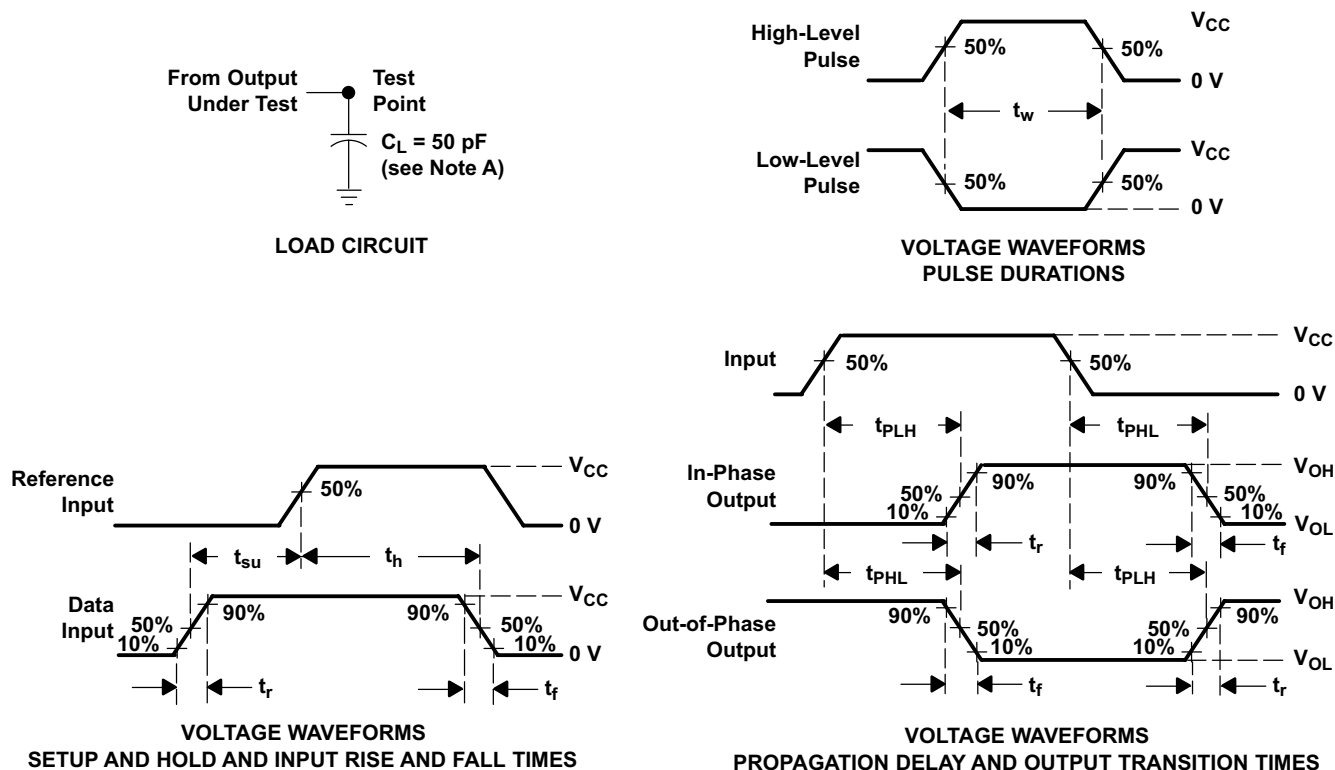

Figure 1. Propagation Delay vs Supply Voltage at $T_A = 25^\circ\text{C}$

7 Parameter Measurement Information

- NOTES:
- A. C_L includes probe and test-fixture capacitance.
 - B. Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: $PRR \leq 1\text{ MHz}$, $Z_O = 50\ \Omega$, $t_r = 6\text{ ns}$, $t_f = 6\text{ ns}$.
 - C. For clock inputs, f_{max} is measured when the input duty cycle is 50%.
 - D. The outputs are measured one at a time with one input transition per measurement.
 - E. t_{PLH} and t_{PHL} are the same as t_{pd} .

Figure 2. Load Circuit and Voltage Waveforms

8 Detailed Description

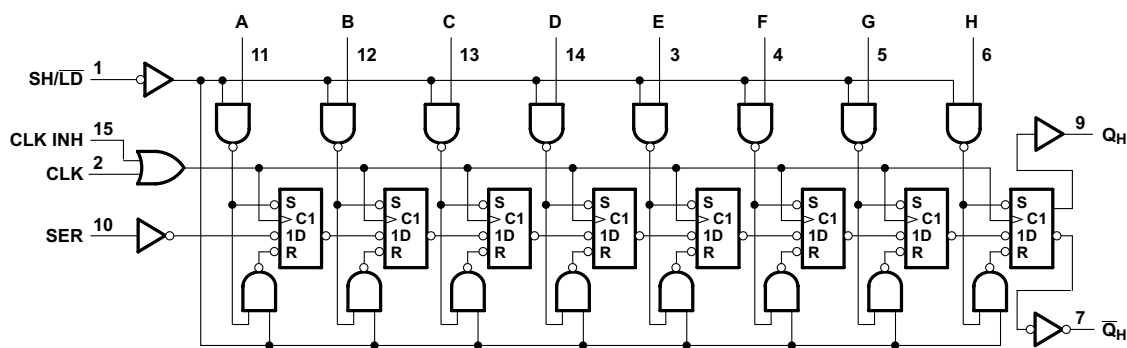

8.1 Overview

The SNx4HC165 is an 8-bit Parallel load shift register with 1 serial input and 8 parallel load input. The device loads all the 8 bits simultaneously through parallel load input when SH/LD is low. This will also ignore any input at CLK or CLK INH.

The device shifts the data when CLK toggles. The data is shifted on rising edge of the clock. Clock Inhibit (CLK INH) inhibits the clock function resulting in no change of the output. If SH/LD is low clock inputs are ignored. To realize the shift function, SH/LD should be high.

CLK and CLK INH functions are interchangeable. If CLK is low then change a clock signal at CLK INH pin causes a shift of data to Q_H. If CLK INH is Low clock signal on CLK pin shifts the data out to Q_H.

8.2 Functional Block Diagram

Pin numbers shown are for the D, DB, J, N, NS, PW and W packages.

Figure 3. Logic Diagram Positive Logic

Figure 4. Typical Shift, Load, and Inhibit Sequence

8.3 Feature Description

The SNx4HC165 has a wide operating voltage range of 2 V to 6 V, outputs that can drive up to 10 LSTTL loads and Low Power Consumption, 80- μ A maximum I. It is typically $t_{pd} = 13$ ns and has ± 4 -mA output drive at 5 V with low input current of 1- μ A maximum. The device features the direct overloading load of data input, meaning parallel data is loaded irrespective of clock signals.

8.4 Device Functional Table

Table 1 lists the functional modes of the SNx4HC165.

Table 1. Function Table

SH/ $\overline{\text{LD}}$	INPUTS		FUNCTION
	CLK	CLK INH	
L	X	X	Parallel load
H	H	X	No change
H	X	H	No change
H	L	\uparrow	Shift ⁽¹⁾
H	\uparrow	L	Shift ⁽¹⁾

(1) Shift : Content of each internal register shifts towards serial output Q_H . Data at SER is shifted into the first register

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SNx4HC165 is an 8-bit shift register that can be used as a serializer in order to reduce the number of connections needed when transmitting signals between boards or to the device. SNx4HC165 can be used to expand inputs for processors with limited GPIOs for examples basic keyboard interface to the controller. SNx4HC165 allows inputs to be load into the shift registers and clock is used to shift data to the processor. Multiple SNx4HC165 can be cascaded together to allow more digital inputs to be interfaced with single processor by connecting output of the cascaded shift register Q_H to serial input SER of the SNx4HC165 and so on. Note this application does not allow the communication to be bi-directional in nature as data can only be read by the processor not written back.

9.2 Typical Application

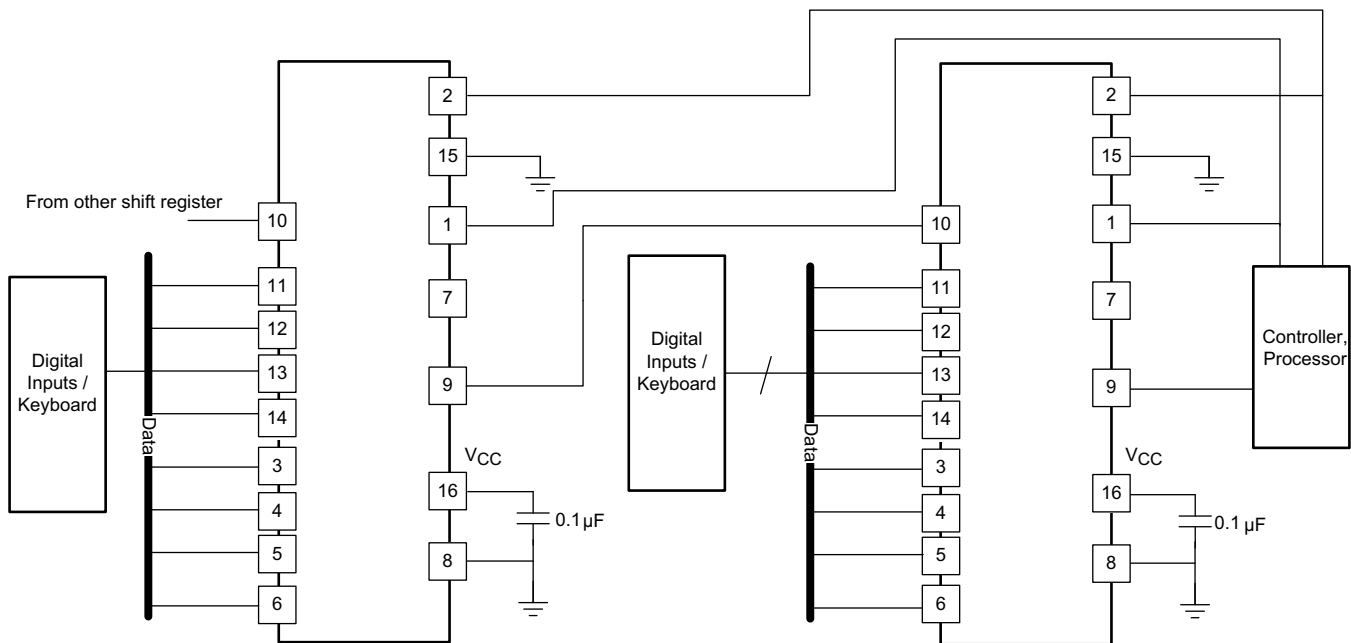

Figure 5. Typical Application Diagram for SN74HC165

9.2.1 Design Requirements

Ensure that the incoming clock rising edge meets the criteria in [Recommended Operating Conditions](#).

9.2.2 Detailed Design Procedure

Ensure that input and output voltages do not exceed ratings in [Absolute Maximum Ratings](#).

Input voltage threshold information for each device can be found in the Electrical Characteristics tables in the [Specifications](#) section.

Detailed timing requirements for each device can be found in Timing Requirements tables in the [Specifications](#) section.

Typical Application (continued)

9.2.3 Application Curve

Figure 6. Propagation Delay vs Supply Voltage at $T_A = 25^\circ\text{C}$

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#) table.

Each V_{CC} pin must have a good bypass capacitor in order to prevent power disturbance. For devices with a single supply, a $0.1\text{-}\mu\text{F}$ capacitor is recommended and if there are multiple V_{CC} pins then a $0.01\text{-}\mu\text{F}$ or $0.022\text{-}\mu\text{F}$ capacitor is recommended for each power pin. It is ok to parallel multiple bypass caps to reject different frequencies of noise. $0.1\text{-}\mu\text{F}$ and $1\text{-}\mu\text{F}$ capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

11 Layout

11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. [Figure 7](#) shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

11.2 Layout Example

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

20	0.342 (8,69)	0.358 (9,09)	0.307 (7,80)	0.358 (9,09)
28	0.442 (11,23)	0.458 (11,63)	0.406 (10,31)	0.458 (11,63)
44	0.640 (16,26)	0.660 (16,76)	0.495 (12,58)	0.560 (14,22)
52	0.740 (18,78)	0.761 (19,32)	0.495 (12,58)	0.560 (14,22)
68	0.938 (23,83)	0.962 (24,43)	0.850 (21,6)	0.858 (21,8)
84	1.141 (28,99)	1.165 (29,59)	1.047 (26,6)	1.063 (27,0)

4040140/D 01/11

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. This package can be hermetically sealed with a metal lid.
 - D. Falls within JEDEC MS-004

N (R-PDIP-T**)

PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
 - The 20 pin end lead shoulder width is a vendor option, either half or full width.

D (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
 - E. Reference JEDEC MS-012 variation AC.

PW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

4040064-4/G 02/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 -  Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 -  Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

DB (R-PDSO-G**)

PLASTIC SMALL-OUTLINE

28 PINS SHOWN

- NOTES: A. All linear dimensions are in millimeters.
 B. This drawing is subject to change without notice.
 C. Body dimensions do not include mold flash or protrusion not to exceed 0,15.
 D. Falls within JEDEC MO-150

MECHANICAL DATA

NS (R-PDSO-G)**

PLASTIC SMALL-OUTLINE PACKAGE

14-PINS SHOWN

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
