Description

The LM336Z5 integrated circuit is precision 5.0 V shunt regulator. The monolithic I_C voltage reference operates as a low temperature coefficient 5.0 V Zener with 0.6 Ω dynamic impedance. A third terminal on the LM336Z5 allows the reference voltage and temperature coefficient to be trimmed.

The LM336Z5 is useful as a precision 5.0 V low-voltage reference, which makes it convenient to obtain a stable reference from low-voltage supplies. Further, since the LM336Z5 operates as shunt regulator, it can be used as either a positive or negative voltage reference.

Absolute Maximum Ratings⁽¹⁾

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only. Values are at $T_A = 25^{\circ}\text{C}$ unless otherwise noted.

Symbol	Parameter	Value	Unit
I_R	Reverse Current	15	mA
I_F	Forward current	10	mA
T_{OPR}	Operating Temperature Range	0 ~ +70	$^{\circ}\text{C}$
T_{STG}	Storage Temperature Range	-60 ~ +150	$^{\circ}\text{C}$

Note:

- The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating.
