DESCRIPTION

The ILD/Q621 and ILD/Q621GB are multi-channel phototransistor optocouplers that use GaAs IRLED emitters and high gain NPN silicon phototransistors. These devices are constructed using over/under leadframe optical coupling and double molded insulation technology. This assembly process offers a withstand test voltage of 7500 VDC.

The ILD/Q621GB is well suited for CMOS interfacing given the CTR_{CESat} of 30% minimum at I_F of 1.0 mA. High gain linear operation is guaranteed by a minimum CTR_{CE} of 100% at 5.0 mA. The ILD/Q621 has a guaranteed CTR_{CE} of 50% minimum at 5.0 mA. The TRANSPARENT IOn Shield insures stable DC gain in applications such as power supply feedback circuits, where constant DC V_{IO} voltages are present.
