

Total solder points: 159

Difficulty level:

beginner 1 2 3 4 5 advanced

High-Q
velleman-kit 

4 channel recorder / logger

Hardware:

K8047

- USB connected and powered.
- Four DC coupled input channels.
- Input resistance 1Mohm.
- Maximum samples per second : 100
- Four input ranges, 3V / 6V / 15V and 30V.
- Sensitivity 10mV.
- Accuracy $\pm 3\%$ of full scale.
- Maximum input 30Vdc.
- Power and recording/diagnostic LED indication on unit.

Software:

- Analogue trace or digital DVM readout.
- 4 simultaneous channels recording.
- Minimum / maximum sample hold function for DVM.
- From 1 sec to 1000 sec per division.
- Storage and recall of screens (full colour) or data.
- Automatic recording option for long time recordings.
- On screen markers for time and voltage.
- DLL included for own development.

1. Assembly (Skipping this can lead to troubles !)

Ok, so we have your attention. These hints will help you to make this project successful. Read them carefully.

1.1 Make sure you have the right tools:

- A good quality soldering iron (25-40W) with a small tip. 
- Wipe it often on a wet sponge or cloth, to keep it clean; then apply solder to the tip, to give it a wet look. This is called 'thinning' and will protect the tip, and enables you to make good connections. When solder rolls off the tip, it needs cleaning.
- Thin rosin-core solder. Do not use any flux or grease. 
- A diagonal cutter to trim excess wires. To avoid injury when cutting excess leads, hold the lead so they cannot fly towards the eyes. 
- Needle nose pliers, for bending leads, or to hold components in place. 
- Small blade and Phillips screwdrivers. A basic range is fine.

For some projects, a basic multi-meter is required, or might be handy

1.2 Assembly Hints :

- ⇒ Make sure the skill level matches your experience, to avoid disappointments.
- ⇒ Follow the instructions carefully. Read and understand the entire step before you perform each operation.
- ⇒ Perform the assembly in the correct order as stated in this manual
- ⇒ Position all parts on the PCB (Printed Circuit Board) as shown on the drawings.
- ⇒ Values on the circuit diagram are subject to changes.
- ⇒ Values in this assembly guide are correct*
- ⇒ Use the checkboxes to mark your progress.
- ⇒ Please read the included information on safety and customer service

* Typographical inaccuracies excluded. Always look for possible last minute manual updates, indicated as 'NOTE' on a separate leaflet.

1.3 Soldering Hints :

Mount the component against the PCB surface and carefully solder the leads

Make sure the solder joints are cone-shaped and shiny

Trim excess leads as close as possible to the solder joint

AXIAL COMPONENTS ARE TAPED IN THE CORRECT MOUNTING SEQUENCE !

REMOVE THEM FROM THE TAPE ONE AT A TIME !

- C10 : 100nF (104, 0.1, u1)
- C11 : 100nF (104, 0.1, u1)

5. Zenerdiode

ZD1 : LM385Z

6. Quartz crystal

X1 : 6MHz

7. Screw connectors

J1 : 2P (CH1)
 J2 : 2P (CH2)
 J3 : 2P (CH3)
 J4 : 2P (CH4)

8. USB connector

J5 : USB B90

9. Electrolytic capacitors. Check the polarity !

C5 : 4,7 μ F / 50V

10. LED's. Watch the polarity!

LD1 : 3mm
 'Red' => Recording
 LD2 : 3mm
 'Green' => Power ON

11. IC's. Watch the position of the notch!

IC1 : VK8047
 Programmed PIC16C745-IP !
 IC2 : TLV274IP

12. Software installation and test

DO NOT CLOSE THE HOUSING YET

&

DO NOT ATTACH THE FRONT STICKER YET

A. Installation :

- Install the software. If the necessary software is not included or if you want to check for updates, you can always download it for free from our Velleman Website www.velleman.be
- An installation wizard will guide you through the installation procedure.
- By default the software is installed in the folder :
'C:\Program Files\Velleman\Pc-Lab2000'

Fig 1.0

B. Test :

- Hook-up a USB cable between a free port of your computer and the K8047 (see page 8.)
- Connect a 9V battery to one of the signal inputs (CH1, CH2, CH3 or CH4), respect the polarity (+ and -)!
- Start the PC-Lab2000 software and select the appropriate device (K8047).

Fig 2.0

- Select 15 or 30V range.
- Press the run button.

The unit is ready for use when a signal appears on the screen.

 Other information concerning this unit can be found on the CD.

13. Final assembly

You can close the housing and affix the front sticker after the final test.

14. Connection

👉 Inspect the assembly once more
