General technical data

ISKRA capacitors for use in electronics are made of dielectric materials as follow:

- polypropylene film
- polyester (polyethyleneterephthalate).

Survey of specific properties of individual dielectrics and use:

Polyester (polyethyleneterephthalate) film

Dielectric constant (25 °C/1 kHz):

$\epsilon_r = 3,25$; ASTM D 150-65T

Dielectric loss (25 °C/60 Hz):

$\tan\delta \leq 20,10^{-4}$ C;
ASTM D 150-65T

Dielectric strength (25 °C/60 Hz):

295 kV/mm; ASTM D 149-64,
ASTM D 2305-67

Temperature coefficient of capacitance:

$TC \approx + 500, 10^{-6}$ C/°C

Temperature range max.:

+ 125 °C

Water absorption (sink for 24 h):

0,8 % max.; ASTM D 570-63

Dielectric absorption:

0,2 to 0,8 %

Polyester capacitors are used mainly in electronic devices where special characteristics of electrical parameters are not required and where wider temperature range is required. Mainly they are used as conjunctive or block capacitors.

Polypropylene film

Dielectric constant (25 °C/1 kHz):

$\epsilon_r = 2,2$; ASTM D 150

Dielectric loss (25 °C/1 kHz):

$\tan\delta \leq 5,10^{-4}$ C; ASTM D 150

Dielectric strength (25 °C/1 kHz):

300 to 380 kV/mm; ASTM D 149

Temperature coefficient of capacitance:

$(- 100 \leq TC \leq -300), 10^{-6}$ /°C

Temperature range max.:

+ 100 °C

Water absorption:

< 0,05 %; ASTM D 202

Dielectric absorption:

0,03 %

Polypropylene capacitors are used mainly in electronic circuits, where following requirements appear:

- small dielectric losses
- high insulation resistance
- negative and defined temperature coefficient (temperature compensation at oscillating circles with ferrite coil)
- high pulse loading
- loading with AC voltage.

Designation of dielectric in type code of capacitors

Type code is composed by three letters and four figures:

K	X	X		Y	Y	Y	Y
↓	↓	↓		↓	↓	↓	↓
1	2	3		4	5	6	7

1st Letter, "K" means capacitor

2nd Letter tells the type of dielectric (special for metallized version)

3rd Letter tells the purpose of use

4th, 5th, 6th, 7th Figure describes construction and design of capacitor and leads

Survey of letter used for single kinds of dielectric:

F - polyester film

E - metallized polyester film

L - polypropylene film

N - metallized polypropylene film

Electrical characteristics

1. Rated capacitance

Rated capacitance C_R values are available according to E-ranges. Available E-ranges (E6, E12, E24, E48, E96, on request E192) are stated at type descriptions in catalogue. The values from range E6 are privileged.

The E-ranges are put down in accordance to IEC-publ. 60063 and DIN 41426.

Required values from E-range are all values from table below, multiplied by positive or negative whole number power exponent of the number 10.

E6 ± 20 %	E12 ± 10 %	E24 ± 5 %	E48 ± 2 %	E96 ± 1 %	E192 ± 0,5 %

2. Tolerance of rated capacitance

Standard tolerances and belonging codes for marking tolerances of rated capacitances are as follow:

Tolerance	± 20 %	± 10 %	± 5 %	(± 2,5 %)	± 2 %	(±1,25 %)	± 1 %	± 0,5 %
Code	M	K	J	(H)	G	(E)	F	D

The narrowest possible tolerance is ± 1 pF (Z).

Available tolerances of rated capacitances are stated at type descriptions in catalogue.

3. Temperature dependence of capacitance

Temperature coefficient TC is defined for temperature range $\vartheta_1 \dots \vartheta_2$ according to DIN 41380 as follows:

$$TC = \frac{C_2 - C_1}{C_3 (\vartheta_2 - \vartheta_1)}$$

C_1 - capacitance at temperature ϑ_1

C_2 - capacitance at temperature ϑ_2

C_3 - capacitance at temperature $(25 \pm 10)^\circ\text{C}$

Temperature coefficient for single type of capacitors is given in $10^{-6}/^\circ\text{C}$.

4. Rated voltage U_R

The rated voltage U_R is the maximum direct voltage which may be applied continuously to the terminals of a capacitor at any temperature between the lower category temperature and the rated temperature.

5. Category voltage U_C

Category voltage U_C is the maximum direct voltage which may be applied to the terminals of a capacitor at its upper category temperature. Adequate reducing of voltage for temperature range between upper rated temperature and category temperature is given at single types of capacitors in catalogue.

6. Alternating voltage loading

Allowed alternating voltage loading for single types is limited to frequency 50 to 60 Hz. The sum of applied alternating voltage (amplitude) and direct voltage to the terminals of a capacitor must not exceed category voltage U_C . In general mica and plastic foil capacitors are not suitable for connection to network, except special versions of capacitors, which are suitable also for such purposes.

7. Allowed self-heating because of alternating voltage loading

If capacitors are loaded with alternating voltages of higher frequencies with sinusoidal or unsinusoidal shape of alternating voltage, than self-heating and pulse loading is to consider.

Self heating of capacitor ($\Delta\vartheta$) is in operating of capacitor conditioned by belonging power loss (P_i) and outer surface of capacitor (S), and is calculated by the following from:

$$\Delta\vartheta(K) = \frac{P_i \text{ (mW)}}{S(\text{cm}^2) \beta}$$

where the base for thermoplastic case is used

$$\beta = 1 \left(\frac{\text{mW}}{\text{K} \cdot \text{cm}^2} \right)$$

Power loss of capacitor (P_i) at loading with sinusoidal voltage of higher frequencies is calculated as follows:

$$P_i = U_{\text{ef}}^2 \cdot 2 \pi \cdot f \cdot C \cdot \tan\delta(f)$$

where:

C = capacitance in F

U_{ef} = effective voltage in V

f = frequency in Hz

$\tan\delta(f)$ = loss factor at frequency f

P_i = power loss in W

At un-sinusoidal alternating voltage it is to be dismantled according to Fourier's analysis to sinusoidal voltages and calculated the power loss as a sum of single partial sinusoidal power losses. For carrying-out the Fourier's analysis the voltage-time diagram is needed.

The sum of temperatures because of self-heating and temperature of surroundings of capacitor may be equal or lower than permitted category temperature with considering the category voltage U_C .

8. Pulse loading

The capacitors charged with un-sinusoidal voltage pulses with quick rise (high du/dt) will be loaded with high current pulses. Because of overloading of internal contacts and connections in capacitor the current must be limited, The boundary current for single types of capacitors depend on:

- amplitude and shape of pulse
- rated voltage of capacitor
- capacitance
- geometrical shape of capacitor.

At the repeating pulses the current loading will be limited by self-heating, surrounding temperature and cooling.

The limit of allowed current loading is given with allowed voltage rise in time (du/dt) in $V/\mu\text{s}$ (volts per microsecond)

$$I_{\text{max}} = C_R \frac{du}{dt}$$

C_R = rated capacitance in μF
 du/dt = allowed pulse loading in $V/\mu\text{s}$

At single types of capacitors the data of allowed pulse loading is valuable for unlimited number of pulses (charging and discharging of capacitors) up to rated voltage U_R . Minimum resistance in series with capacitor is then:

$$R = \frac{U_R}{C_R \cdot du/dt}$$

where:

U_R = rated voltage of the capacitor in V

C_R = rated capacitance in μF

R = min. series resistance in Ohm

At the pulses of lower voltage than rated voltage the given values of allowed pulse loading are to multiply with the relation factor rated voltage/pulse voltage.

If the demanded pulse loading of the capacitor comply with the requests in certain case, the control is needed to be sure that power loss is not exceeded, resp. self-heating is in area of allowed pulse loading max. 15 °C. In critical cases the capacitor surface temperature is to measure and temperature fall of 5 °C inside capacitor is to consider.

9. Disipation factor $\tan\delta$

Every capacitor has beside desired capacitance also of her electrical properties, which are shown as constituent elements in following by connection:

L_S - serial inductance

R_S - serial resistnace

R_i - insulation resistance (parallel resistance)

C - capacitance

The real capacitor has always incorrectnesses as serial inductance L_S and loss resistance R_S and R_i . The inductance can be reduced but not to zero. At certain frequency f_0 the capacitance and inductance reactances are equal:

$$\frac{1}{\omega_0 C} = \omega_0 L$$

where

$$\omega_0 = 2\pi f_0$$

At frequencys higher than f_0 (the resonant frequency) the inductive component prevail. The resistance R_S is the resistance of the capacitor's wires, transitional resistance of electrode contacting, the resistance of capacitor electrodes and polarisation losses in capacitor dielectric. Resistance R_i is insulating resistance depending on insulating properties of dielectric in capacitor.

Values R_S and R_i determine losses in capacitor and depend on temperature, frequency, voltage and capacitance and cause heating of capacitor. The resistance R_i is much bigger then the resistance R_S so we can change both resistances only with equivalent serial resistance of capacitor ESR.

The relation between equivalent serial resistance of capacitor ESR and his reactance $1/\omega C$ is dissipation factor of capacitor and is marked with $\tan\delta$.

$$\tan\delta = ESR \cdot \omega \cdot C$$

The values of dissipation factor ($\tan\delta$) are given at single types of capacitors in catalogue.

10. Insulation resistance R_i

Insulation resistance of capacitor is given as resistance R_i in $M\Omega$ or as time constant in seconds $R_i \cdot C_R = M\Omega \cdot \mu F$.

The insulation resistance is the relation between the applied direct voltage and the current, after precise determined time. The limited values for insulation resistance are given for testing time 60 sec. at 20 °C.

Test voltages in accordance to rated voltages are as follow:

Rated voltage U_R	Test voltage
< 100 V	10 V
100 V $\leq U_R$ < 500 V	100 V
≥ 500 V	500 V

Lead spacing 7,5 mm

Capacitors

Type KFU

Polyester capacitors

As dielectric high quality polyester film is used, electrodes are of tin or aluminium foil. The winding is extended foil design, terminals are electrically welded to electrodes on frontal side. Such version is little inductive and because of good contacting suitable for pulse loading operation.

Typical electrical characteristics of polyester capacitors KFU

Variation of capacitance as a function of temperature

$$\frac{\Delta C}{C} = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of dissipation factor (tanδ) as a function of frequency

$$\tan \delta = f(f)$$

Variation of dissipation factor (tanδ) as a function of temperature

$$\tan \delta = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of insulation resistance as a function of temperature

$$R_i = f(\vartheta)$$

Variation of capacitance as a function of frequency

$$\frac{\Delta C}{C} = f(f)$$

Capacitors

Type KFU1910 radial leads, pitch 10 mm to 27,5 mm

TECHNICAL DATA

General technical data

Dielectric:	polyester (polyethyleneterephthalate) film
Electrodes:	tin or aluminium foil
Winding:	non-inductive construction, flat shape
Leads:	tinned copper wire; standard lengths l_1 : $4^{\pm 0,5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation:	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking:	Iskra symbol, capacitance, tolerance, rated voltage
Climatic category:	55/100/56, IEC 60068-1
Temperature range:	- 55 °C to + 100 °C
Complies with standards:	IEC 60384-11
Electrical data	
Capacitance range:	1000 pF to 1 μ F
Standard values of capacitance (C_R):	range E6
Capacitance tolerance:	$\pm 20\%$ (M), $\pm 10\%$ (K)
Rated voltage (U_R):	100 V DC, 250 V DC, 400 V DC, 630 V DC, 1000 V DC
Allowed alternative voltage up 60 Hz:	63 V AC, 100 V AC, 160 V AC, 200 V AC, 250 V AC
Category voltage (U_C):	to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1,25 % per 1 °C
Test voltage:	$2 \times U_R$, 2 s
Dissipation factor ($\tan\delta$):	$\leq 60 \times 10^{-4}$ at 1 kHz at 20 °C
Insulation resistance (R_R):	$\geq 30\,000\text{ M}\Omega$ for $C_R \leq 0,33\ \mu\text{F}$; $R_i \times C_R \geq 10\,000\text{ s}$, for $C_R > 0,33\ \mu\text{F}$
Self inductance:	appr. 10 nH/cm length of capacitor and leads
Soldering on printed circuit boards:	temperature of soldering bath 265 °C max., soldering time 5 s max.
Pulse loading (du/dt):	1000 V/ μ s

Capacitors

Type KEU

Metallized polyester capacitors

As a dielectric high quality polyester film with good electrical properties is used. Electrodes of capacitor are vacuum metallized aluminium. The thickness of aluminium is approximately 0,01 μF to 0,04 μF , so the capacitor is self-regenerative after break down. The weak point in dielectric because of un-homogene material in some microseconds regenerate with energy of current bow of charged capacitor. In this process metallized

layer of aluminium in the area of weak point without any damage of dielectric burns out. The weak point is blameless insulated. So metallized capacitor withstands breakdowns without a permanent short circuit with considering self healing resp. regeneration. The majority of weak points are cleared during the high voltage burning-out in the manufacturing process.

Contact surface is made by spraying

the parts of metal contact material. Leads are electrically welded on contact surface. The technology and control system in production assure high liability of capacitors also in use on low voltages and high frequencies. In the case of pulse loading or loading the capacitor with alternative voltage of high gradient of growth is to consider allowed pulse loading du/dt resp. maximal allowed current.

Typical electrical characteristics of metallized polyester capacitors KEU

Variation of capacitance as a function of temperature

$$\frac{\Delta C}{C} = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of dissipation factor ($\tan\delta$) as a function of frequency

$$\tan\delta = f(f)$$

Variation of dissipation factor ($\tan\delta$) as a function of temperature

$$\tan\delta = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of insulation resistance as a function of temperature

$$R_i = f(\vartheta)$$

Variation of capacitance as a function of frequency

$$\frac{\Delta C}{C} = f(f)$$

Type KEU1930 taped

radial leads, pitch 7,5 mm

TECHNICAL DATA

General technical data

Dielectric:	polyester (polyethylene terephthalate) film
Electrodes:	vacuum metallized aluminum on dielectric
Winding:	non-inductive flat shape
Leads:	tinned copper wire; standard lengths l_1 : $4^{\pm 0,5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation:	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking:	capacitance, tolerance, rated voltage
Climatic category:	55/100/56, IEC 60068-1
Temperature range:	- 55 °C to + 100 °C
Complies with standards:	IEC 60384-2

KEU 1930 (dimensions in mm)

KEU 1930 taped (dimensions in mm)

Electrical data

Capacitance range:	1000 pF to 1 μ F
Standard values of capacitance (C_R):	range E6
Capacitance tolerance:	$\pm 20\%$ (M), $\pm 10\%$ (K), and $\pm 5\%$ (J) on special request
Rated voltage (U_R):	63 V DC, 100 V DC, 250 V DC, 400 V DC, 630 V DC
Allowed alternative voltage up to 60 Hz:	40 V AC, 63 V AC, 160 V AC, 200 V AC, 220 V AC
Category voltage (U_C):	to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1,25 % per 1 °C
Test voltage:	$1,6 \times U_R$, 2 s
Dissipation factor ($\tan\delta$):	$\leq 100 \times 10^{-4}$ at 1 kHz and 20 °C
Self inductance	≤ 10 nH at leads length 2 mm
Soldering on printed circuit board:	temperature of soldering bath 270 °C max., soldering time 5 s max.
Pulse loading (du/dt):	10 V/ μ s for $U_R = 63$ V DC 15 V/ μ s for $U_R = 100$ V DC 30 V/ μ s for $U_R = 250$ V DC 50 V/ μ s for $U_R = 400$ V DC 70 V/ μ s for $U_R = 630$ V DC

Insulation resistance (R_i) at 20 °C:

Rated capacitance C_R (μF)	Min. R_i or $R_i \times C_R$ between terminals	
	$U_R > 100 \text{ V DC}$	$U_R \leq 100 \text{ V DC}$
$\leq 0,33$	7500 $\text{M}\Omega$	3750 $\text{M}\Omega$
$> 0,33$	2500 s	1250 s

Capacitors

Type KLI

Polypropylene capacitors

As a dielectric a high quality polypropylene film with excellent electrical properties is used. The electrodes are of aluminium foil and vacuum evaporated metal on polypropylene film for internal serial connection. Winding is extended foil design and enables contacting

of leads on aluminium electrodes for high currents. Capacitors are suitable for operating in pulse circuits (for instance in TV sets in thyristor or transistor deflection steps) where high pulse loading appear.

Typical electrical characteristics of polypropylene polyester capacitors KLI

Variation of capacitance as a function of temperature

Variation of dissipation factor (tanδ) as a function of frequency

Variation of dissipation factor (tanδ) as a function of temperature

Variation of insulation resistance as a function of temperature

Variation of capacitance as a function of frequency

Capacitors

Type KLI1910

radial leads, pitch 7,5 mm to 27,5 mm

TECHNICAL DATA

General technical data

Dielectric:	polypropylene film
Electrodes:	metal foil; metal foil and metallized polypropylene film (internal series connection for $U_R \geq 630V$ DC and $r \geq 15mm$)
Winding:	non-inductive construction, flat shape
Leads:	tinned copper wire, standard lengths l_1 : $4^{\pm 0,5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation:	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking:	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category:	55/100/56 IEC 60068-1
Temperature range:	- 55 °C to + 100 °C
Complies with standards:	IEC 60384-13; IEC 60384-16

Electrical data

Capacitance range:	100 pF to 0,22 μ F
Standard values of capacitance (C_R):	range E6 and E12
Capacitance tolerance:	$\pm 20\%$ (M), $\pm 10\%$ (K), and $\pm 5\%$ (J)
Rated voltage (U_R):	100 V DC, 160 V DC, 250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC, 2000 V DC
Allowed alternative voltage up to 60 Hz:	63 V AC, 90 V AC, 125 V AC, 160 V AC, 200 V AC (for 630 V DC, $r \leq 10$ mm), 300 V AC, 400 V AC, 500 V AC, 600 V AC
Category voltage (U_C):	up to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1,25 % per 1 °C
Test voltage:	$2 \times U_R$ (for $U_R \leq 630$ V), 2s; $1,6 \times U_R$ (for $U_R \geq 630$ V and $r \geq 15$ mm), 2s
Dissipation factor ($\tan\delta$):	$\leq 5 \times 10^{-4}$ at 1 kHz and 20 °C $\leq 6 \times 10^{-4}$ at 10 kHz and 20 °C $\leq 10 \times 10^{-4}$ at 100 kHz and 20 °C for $C_R \leq 0,1 \mu$ F.
Insulation resistance (R_i) at 20 °C:	≥ 100000 M Ω
Soldering on printed circuit board:	temperature of soldering bath 270 °C max., soldering time 5 s max.

KLI1910 (dimensions in mm)

Diameter of leads:

Pitch r (mm)	Diameter of leads ϕ (mm)
7,5; 10	0,6
15; 22,5; 27,5	0,8

Typical application:

Switching circuits in electronic ballast; applications with high voltage and very high current.

Capacitors

Type KNI

Metallized polypropylene capacitors

As a dielectric a high quality polypropylene film of excellent electrical properties is used. Electrodes of capacitors are of double sides vacuum metallized aluminium on polyester film. Winding is cylindrical extended foil design. Such construction enables very good contacting and is able to translate higher currents.

The capacitor has the property to regenerate after break-down. Capacitors are suitable for use in high pulse loading (for instance in TV sets for "S" correction) because of self regenerative properties and low loss angle, where common types of metallized capacitors do not comply the requirements.

Typical electrical characteristics of metallized polypropylene capacitors KNI

Variation of capacitance as a function of temperature

$$\frac{\Delta C}{C} = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of dissipation factor (tanδ) as a function of frequency

$$\tan\delta = f(f)$$

Variation of dissipation factor (tanδ) as a function of temperature

$$\tan\delta = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of insulation resistance as a function of temperature

$$R_i = f(\vartheta)$$

Variation of capacitance as a function of frequency

$$\frac{\Delta C}{C} = f(f)$$

Capacitors

Type KNI1910 radial leads, pitch 7,5 mm to 27,5 mm

TECHNICAL DATA

General technical data

Dielectric:	polypropylene film
Electrodes:	double-sided metallized polyester film and metallized polypropylene film (internal series connection for for $U_R \geq 630V$ DC and $r \geq 15mm$)
Winding:	non-inductive construction, flat shape
Leads:	tinned copper wire, standard lengths l_1 : $4^{\pm 0,5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation:	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0
Marking:	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category:	55/100/56 IEC 60068-1
Temperature range:	- 55 °C to + 100 °C
Complies with standards:	IEC 60384-16; IEC 60384-17

Electrical data

Capacitance range:	680 pF to 2,2 μ F
Standard values of capacitance (C_R):	range E12
Capacitance tolerance:	$\pm 20\%$ (M), $\pm 10\%$ (K), and $\pm 5\%$ (J)
Rated voltage (U_R):	250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC, 2000 V DC
Allowed alternative voltage up to 60 Hz:	180 V AC, 250 V AC, 300 V AC, 400 V AC, 500V AC, 630 V AC, 650 V AC
Category voltage (U_C):	up to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1,25 % per 1 °C
Test voltage:	$1,6 \times U_R$, 2 s
Insulation resistance (R_i):	$\geq 100000 M\Omega$ at 20 °C for $C_R \leq 0,33 \mu F$ $R_i \times C_R \geq 30000$ s at 20 °C for $C_R > 0,33 \mu F$
Soldering on printed circuit boards:	temperature of soldering bath 270 °C max., soldering time 5 s max.
Dissipation factor ($\tan\delta$):	$\leq 3 \times 10^{-4}$ at 1 kHz and 20 °C, $\leq 6 \times 10^{-4}$ at 10 kHz and 20 °C for $C_R \leq 1 \mu F$ $\leq 15 \times 10^{-4}$ at 100 kHz and 20 °C for $C_R \leq 0,1 \mu F$.

KNI1910 (dimensions in mm)

Diameter of leads:

Pitch (mm)	Diameter of leads ϕ (mm)
7,5; 10	0,6
15; 22,5; 27,5	0,8

Typical application:

Deflection circuits in TV-sets; protection circuits in SMPS (switch mode power supplies) and in electronic ballast; applications with high voltage and current.

Pulse loading (du/dt):

U_R (V DC)	Pitch r (mm)

Capacitors

Type KNU

Metallized polypropylene capacitors

As a dielectric a high quality polypropylene film of excellent electrical properties is used. Electrodes are of vacuum evaporated metal on dielectric. Leads are electrically welded on

contact surface of capacitors. So the possibility for bad contact or even loss of contact during the operation of capacitors is excluded.

Typical electrical characteristics of metallized polypropylene capacitors KNU

Variation of capacitance as a function of temperature

$$\frac{\Delta C}{C} = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of dissipation factor (tanδ) as a function of frequency

$$\tan \delta = f(f)$$

Variation of dissipation factor (tanδ) as a function of temperature

$$\tan \delta = f(\vartheta) \text{ at } 1 \text{ kHz}$$

Variation of insulation resistance as a function of temperature

$$R_i = f(\vartheta)$$

Variation of capacitance as a function of frequency

$$\frac{\Delta C}{C} = f(f)$$

Capacitors

Type KNU 1910

radial leads, pitch 10 mm to 27,5 mm

TECHNICAL DATA

General technical data

Dielectric:	polypropylene film
Electrodes:	vacuum metallized on dielectric
Winding:	non-inductive construction, flat shape
Leads:	tinned copper wire, standard lengths l_1 : $4^{\pm 0,5}$; 6^{-1} ; $25^{\pm 5}$. Other lead lengths on request.
Encapsulation:	flame-retardant plastic case with flame-retardant epoxy resin seal, UL 94 V-0, resistant to wash in halogenated solvents
Marking:	Iskra symbol, capacitance, tolerance, rated voltage, type designation
Climatic category:	55/100/56 IEC 60068-1
Temperature range:	- 55 °C to + 100 °C
Complies with standards:	IEC 60384-16

Electrical data

Capacitance range:	1000 pF to 6,8 μ F
Standard values of capacitance (C_R):	range E6
Capacitance tolerance:	$\pm 20\%$ (M); $\pm 10\%$ (K) and $\pm 5\%$ (J) on special request
Temperature coefficient of capacitance (T_C):	appr. $- 200 \times 10^{-6} / ^\circ\text{C}$
Rated voltage (U_R):	250 V DC, 400 V DC, 630 V DC, 1000 V DC, 1600 V DC
Allowed alternative voltage up to 60 Hz:	160 V AC, 220 V AC, 250 V AC, 300 V AC, 500 V AC
Category voltage (U_C):	up to + 85 °C $U_C = U_R$; from + 85 °C to + 100 °C voltage U_R is lowered for 1,35 % per 1 °C
Test voltage:	$1,6 \times U_R$, 2 s
Insulation resistance (R_i) at 20 °C:	$\geq 100000 \text{ M}\Omega$ at 20 °C for $C_R \leq 0,33 \mu\text{F}$ $R_i \times C_R \geq 30000 \text{ s}$ at 20 °C for $C_R > 0,33 \mu\text{F}$
Self inductance:	appr. 10 nH/cm length of capacitor and leads
Soldering on printed circuit boards:	temperature of soldering bath 270 °C max., soldering time 5 s max.

KNU1910 (dimensions in mm)

Diameter of leads:

r (mm)	ϕ (mm)
10	0,6
