

XBee-PRO[®] 868

Long-Range Embedded RF Modules for OEMs

XBee-PRO 868 modules deliver wireless connectivity with exceptional RF range performance for European applications.

Overview

XBee-PRO 868 embedded RF modules provide extended-range wireless connectivity to end-point devices. These modules use a proprietary 868 MHz point-to-multipoint protocol for European applications. Capable of 500 mW of EIRP transmit power and -112 dBm receive sensitivity, the XBee-PRO 868 is the most powerful XBee product ever offered. Supporting RF line-of-sight distances up to 40 km, these modules are ideal for challenging environments where RF penetration and transmission distance are critical to the application.

As a part of Digi's XBee[®] family of RF products, these modules are easy to use, share a common hardware footprint, and are fully interoperable with other XBee products utilizing XBee-PRO 868 technology. They are available in a variety of different protocols to suit different applications, enabling users to substitute one XBee module for another with minimal development time and risk.

Digi's unsurpassed offering of products provides users with seamless communication between devices. XBee adapters provide wireless connectivity to electronic devices in wired networks. ConnectPort[™] X gateways enable users to access and configure remote devices in a network.
